According to Kefa Olang Smax4pnp.exe is a system process that is part of the SoundMAX software program. It's not necessarily for sound to work on your computer, but is mostly used to run or add components to the SoundMAX software program. Smax4pnp.exe is not a malicious spyware and usually works automatically when launched and can be safely removed without affecting the sound on your computer. If you use SoundMAX audio, it doesn't do any good on your computer. Click Ctrl, Alt and Delete on your computer to open Windows Task Manager. Click on the Processes tab from above. Scroll through Smax4pnp.exe. Click end of the process to stop the process from starting it. Click Windows Start and click Search. Click search for all the files and folders on the left bar to open the search box. Search and delete this file: Smax4pnp.exe. Free the bin to complete the removal process. Sanchi Oberoi/Getty Images I've never sufficiently mastered the art of on-and-off-again relationships. Call me small, but my ex blocked the moment we decided that we would rather watch stranger things with Rando Tinder matches than each other... aka, we're breaking up. Yes, I not only block their phone number, Snapchat, Instagram, and Venmo, but also their mother, father, cousins, and first class teacher. This pretty much kills any chance of reconciliation from me and my ex (who may still be waiting on his text to be delivered). This content is imported from an embedded name. You can find the same content in a different format, or you may be able to find more information on your website. This, my friends, is called rule No Contact- and to be honest, has it helped me move on from all my past relationships (well, more like situationships) relatively faster than my friends who still text their ex y up? At 2 a.m. do. Rule No Contact where you don't call, text, or message the former anyway after a breakup. It involves not talking to your friends or family about them or breaking up yourself, says dating and breakup coach Lee Wilson. There's also no deadline either. If it works for you to have a monthly No Contact rule, do your thing. If you want to be like me and forever cut them out of your life forever, go for it. Do it as long as you need to, Wilson says. However, it can be effing hard to master this rule. It takes a lot of willpower and personal restraint, especially if you see your ex in your favorite dive bar. If you're considering giving it a shot, here's what seven women had to say about their experiences with rule No Contact and why it might be the best choice when going on: That hundred percent helped me. I couldn't to someone just because it was convenient or because things got difficult. If I hadn't cut things off completely, I would have gone back to him, or at least kept talking to him. -Sela, 24 I do it every time. Remove their numbers and unfollow them-no temptations! Suck all the poison. .28It definitely hurts more, but it allowed us both to heal and grow without succumbing to the temptation to fall back into things. - Kate, 21 I completely cut it out of my life because I knew I couldn't handle having just a part of it. - Cassandra, 26 I'm currently trying it, but it doesn't stick out. This makes it more difficult for me to move on. I was the one who offered to go a few months without talking, so I deleted his number and muted all his social channels. But from time to time he writes to me, and it confuses me. It definitely makes it harder to get over it and every time it stretches and we talk a little bit, I feel like I'm starting all over again with my feelings. -Ciara, 24 I did it and it helped. Without letting him in again, I was able to discover again. -Alex, 27 I decided to make rule No Contact for six months because we wanted different things. It would be very troublesome to stay in touch knowing that we wanted two different things. It hurts because it's hard to throw anything cold turkey, but it was a good choice because it showed me that I could be on my own and be happy without being in touch with him or with it to be a part of my daily life. - Kayleigh, 25 Now, if you just can't seem to delete (or block) your ex long enough before the fros' starts calling them again, that's fine - you're not alone. Try changing your name on your phone so you are reminded what you are doing anytime you pull up their contact. When you see your ex's name, it can still bring sadness to your life or literally make your heart tremble, says clinical psychologist Tricia Wolanin, PsyD. So I recommend temporarily changing the name in the phone to pathetic or idiot. Hey, whatever's up to the job to stop you from calling or writing, right? It will look very similar to your beginning of Happiness-TRUST. This content is created and supported by a third party and is imported to this page to help users provide their email addresses. You can find more information about this and similar content on piano.io By Kefa Olang Updated September 28, 2017 DW20.exe is a bug reporting app packed with Microsoft products such as Microsoft Office. Once installed, it collects information automatically when the Microsoft app suddenly shuts down, freezes, or exits; it then allows users to send information to Microsoft for analysis. This report helps Microsoft address the challenges of improving future versions of the software. DW20.exe is not required for Microsoft programs to run and can be disabled and removed from the launch to prevent it from running. Click Ctrl, Alt and Delete together to open the Windows Task Manager. Click the Processes button to show all the processes that work in time on your computer. Scroll and click DW20.exe if you have one. Click end of the process. If it doesn't currently work, move on to the next step to disable it and remove it from the run. Click Windows Start and click the right mouse Computer. Scroll down and click control in the pop-up menu. Click the Services and Apps button on the left window window of your computer control. Click services. Scroll through the right panel and double-click the Microsoft Application Error Report. Choose Disabled in the Startup Type window and click Good. Close the service window. This action will eliminate the error message from the launch and prevent it from running. Let's face it: some apps have really ugly icons. Sure, you can always create a shortcut for your EXE file and then change the icon for the label, but what fun would it be? Here's how to change the icon for the EXE file itself. Windows doesn't include a built-in way to change the icon for EXE files, so you need to download a free copy of Hacker Resources before you get started. Once you've got that installed, light up file Explorer and find a folder that contains your EXE file. If you have a shortcut to the app and you're not sure where it's located, you can click on the shortcut (or Shift-Right Click on it if it's in the taskbar or Start menu) and choose the open file location. When you find a folder containing the EXE file, make a copy of that file as a backup just in case. Select a file, click Ctrl-C, and then tap Ctrl-V to insert a copy directly into the same folder. When you install Resource Hacker, it added the option to the context menu that you get when you click the files with the right button. Click the right button on the original EXE file (not the copy you made) and select Open using hacker. In the Hacker Resource window, select the Icon folder in the left glass. Click the Action menu and then select Replace the icon. In the Replace Icon window, click the Open File button with the new icon and view the location of the icon you want to use. The source may be the EXE, DLL, RES or ICO file. Once you've selected the icon, it's displayed in the Replace Icon window. Next, select a replacement icon from the list on the right. If you see a few of these icons, the top item is usually the main icon of the EXE file, but you may need to review them to make sure. When you choose the icon you want to replace, click Replace. Back in the main Resource Hacker window, you'll see that the Icon folder you choose now shows several different sizes of your chosen icon as a replacement. Now you're ready to save the file by replacing the original EXE file when it asks, and exit the Hacker resource. When you are done, go check out the new icon for your EXE file in File Explorer. And if you ever want to go back to the original, or if you have any problems with opening the EXE file, you can recover the original file from a copy you made before you get started. Friendly warning! We work hard to be precise. But these are unusual times, so please that events are still happening. Lenor Skomala's comedy tracks the chaos that ensues when the usual ex-wife of two good friends returns in life is unexpected. Magda S. Nyiri directs.
